

Software firm seeks partners in Ireland, Scotland and Europe.

Curvaceous Software from the UK is the developer of the award winning Geometric Process Control Technology. GPC allows industries dealing with any complex processing and production to identify the operating mode, within complex sets of parameters that will give maximum efficiency, combined with maximum output.

Widely reported in the media, Curvaceous has enquiries from potential customers from around the World, so licensees and trade partners are now sought from process control consultants interested in learning these techniques. Particular geographic areas of particular interest are in Scotland, Ireland, Germany and Scandinavia.

Recently appointed Curvaceous licensees have been from North America and Australia – Curvaceous has selected these companies for their relevant experience and market knowledge, and provided training in the capabilities and use of the software.

Founded in 1998, Curvaceous Software Ltd is a rapidly expanding UK based technology company providing intelligent solutions to process optimisation and control problems. Holding patents for innovative technological discoveries the Curvaceous Suite of products, including Curvaceous Visual Explorer are continually being developed and upgraded to better suit customer needs.

With an ever-increasing client base of over seventy customers including, for example, AstraZeneca, BAE Systems, BP, Dow Corning, DSM, Huntsman Petrochemicals, INEOS Chlor, LaFarge Cement, Nestle, Pilkington Glass and Aughinish Alumina Curvaceous Software is set to expand successfully.
